

Assignment: Document Data Extraction

Product Overview

Our customers store various types of documents in a folder , e.g., order forms, purchase orders. We need a solution that automatically processes this folder, identifies the document type, and extracts fields based on the customized definitions per customer and document type.

The solution should extract both **Structured fields** and **Natural language-based data**.

Goal

Build pipeline that extracts fields according to the document type and customer definitions.

Success Criteria / KPIs

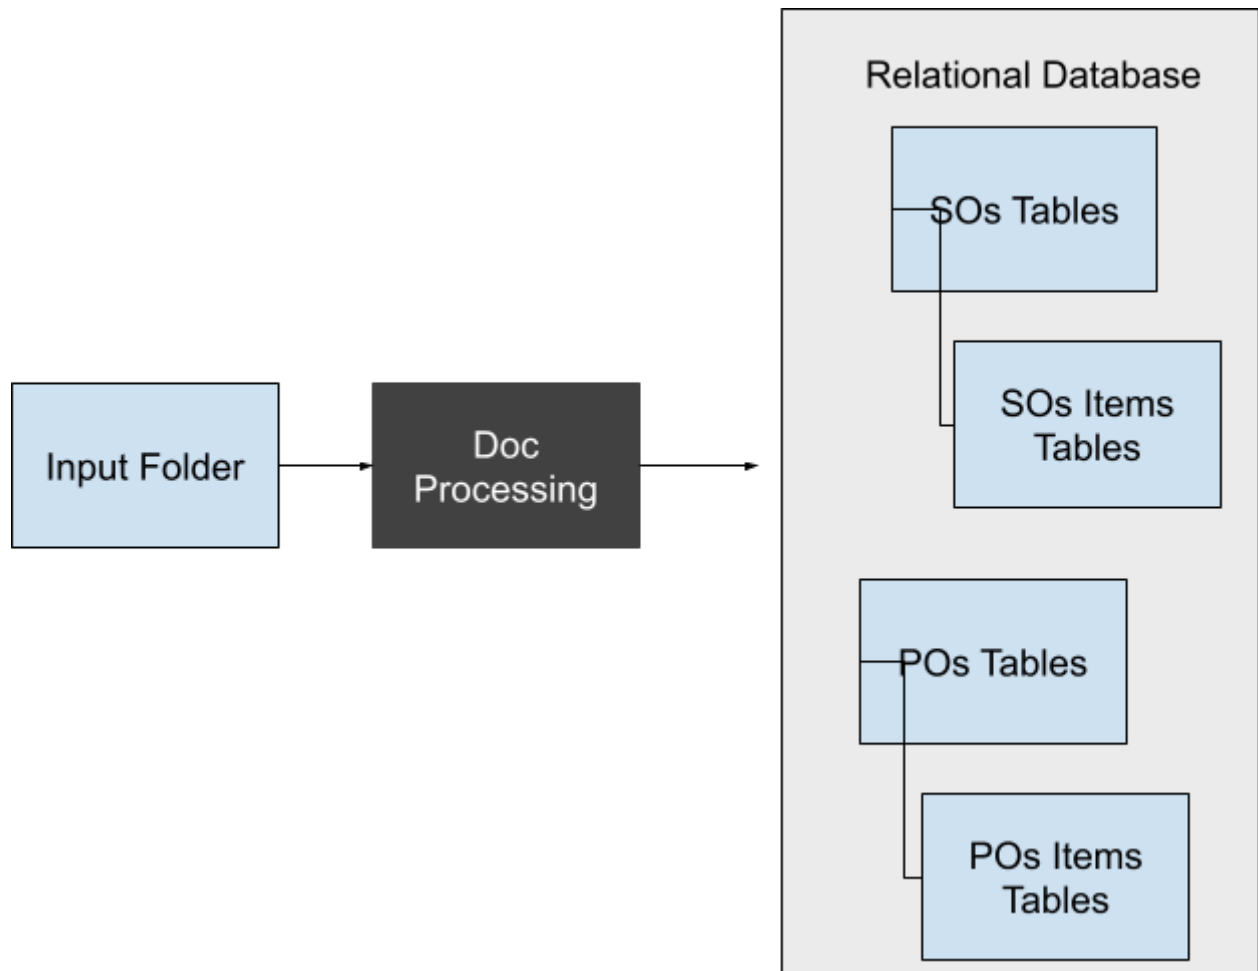

1. **Accuracy:** ≥95% correct extraction of fields
2. **Coverage:** Works for at least 3 different document types.
3. **Adaptability:** Handles at least 2 different customer-specific variations per document type.

Field to be extract – Order Form / Purchase Order :

- Start date – Format “mm-dd-yyy”
- End date – Format “mm-dd-yyy”
- Amount
- Payment terms – Format “Net xx”
- Billing address
- Customer signature – True/False
- List of items
 - Product name
 - Quantity
 - Price
 - Total Amount
- Special terms | Burst – on the item level
- Special terms | Technical account manager

Technical Overview

Process any document landing in a dedicated folder and transform into tabular structured data
